HIGHER EDUCATION AND RESEARCH REFORM IN LITHUANIA

RESETTING THE SYSTEM TOWARDS COMPETITIVE FUTURE
Population: 3,054 million
Number of students: 200,000
22 universities: 14 state, 8 private
23 colleges: 13 state, 10 private
11 state research institutes
5 integrated science, study and business centers (“valleys”)
13,800 researchers, 6,400 with PhDs
300 - 400 new doctoral degrees each year
10.7% researchers in business and industry
Investments in R&D: 0.8% of GDP
Within the last 20 years after becoming an independent country, Lithuania has been in the process of intense change in almost all fields. Significant and intensive steps towards modern democratic state have occurred and are still taking place in all fields of our society.

One of the most sensitive areas for structural shifts has been higher education and research. Lithuanian and foreign experts, students and academic community have been debating about the need for systematic reform and its model for at least 10 years.

Finally, after prolonged political and academic disputes, in April 2009, the Parliament of Lithuania passed the Law on Higher Education and Research, which marked the start of the systematic restructuring of Lithuania’s higher education and scientific research.

Considering global and national context and the need for modernisation, the Lithuanian Government initiated systemic reform based on the following principles:

- Competition as the main driving force for progress in higher education
- New financing method: funding the student, not the institution
- Strengthening colleges and revamping student loan system
- Enhancing autonomy of universities
- Enabling competitive research

We hope our efforts will become a success story to be shared internationally.

Gintaras Steponavičius
Minister of Education and Science
Prior to the reform, enrollment in higher education in Lithuania had been higher than any other European country, but there had been serious concerns about higher education quality. Symptoms include:

- expenditure per student among the lowest in Europe
- many of the most capable students leaving the country to study abroad
- indicators of research output among the lowest in Europe
- supply of higher education places exceeding demand

Research

Not effective financing – old Soviet time structures – weak output

- high public spending on science and technology institutes, yet the results in terms of innovation below those of most other countries
- private sector playing a very small role in research and development
- state funding mostly used to support the core costs of research institutes, only a small part – competitively
- weak ties between research and business

New Law on Higher Education and Research Passed on 30-04-2009

- Competitive funding of HE via student vouchers
- Programme based competitive research funding
- Consolidation of research institutes
- Institutional reform of universities and colleges
- External institutional evaluation
- Intellectual rights protection

Changes in Financing and Management
HIGHER EDUCATION AND RESEARCH REFORM IN LITHUANIA

INNOVATION – SYSTEM OF STUDENT VOUCHERS

State funding per student raised twice.

Student voucher is a tuition fee covered by state.

State funding for bachelor studies is provided in the form of student vouchers to best entrants applying to universities and colleges. Student vouchers are awarded to incoming students based on their secondary education graduation results.

Each year two voucher quotas are established: one for colleges, one for universities.

State funding distributed into 6 fields.

State funding is set to have balanced numbers of people after completing secondary education entering each institution type:

- universities
- colleges
- vocational schools

State financing – First-year students

Student vouchers: distribution

- Social sciences: 34%
- Technology sciences: 15%
- Biomedical sciences: 8%
- Physical sciences: 6%
- Humanities: 4%
- Arts: 33%

Population (age group 30-34) with tertiary education, 2010

Before - Funding distributed to institutions according to preset number of new students
After - Funding tied to student – best entrants take the state money where they go

Before - Best applicants not always received state funding, some study programmes did not fill the preset number of seats
After - Competitive grades and motivation of applicants went up, e.g. the minimal entrance grade for state funding in colleges rose thrice

Before - State financing restricted to state universities and colleges only
After - State funding going to the institution chosen by best entrants – whether state or private

Before - State funding limited to full-time students
After - State funding available to full-time, part-time and extramural students
STATE SUPPORTED STUDENT LOANS

Before
- Total amount of funding available – 5,7 million €
After
- Total amount of funding available – 29 million € in 2009, 43 million € in 2010

Before
- Loans restricted to students of state universities and colleges
After
- Loans available to students of all institutions of higher education – state and private

Before
- Living expenses and part-time studies abroad
After
- Tuition costs, living expenses and part-time studies abroad

SOCIAL SCHOLARSHIPS

Before
- Limited to students of state universities and colleges
After
- Available to students of all institutions of higher education – state and private

Before
- State financed students only
After
- Available to all students – state- or self-financed

OVERHAULED STUDY SYSTEM – TOWARDS THE BEST INTERNATIONAL STANDARDS

National Higher Education Programme – skills and competences of students and professors, investment into study infrastructure – 221,28 million €

Of 1200 degree programmes offered by Lithuanian colleges and universities, more than 200 are being renewed.

New international joint degree programmes are being developed. Currently there are 6 joint degree programmes. To finance further development – 18,5 million € allocated. By 2013, the national goal is to have at least 15 more international joint degree programmes.

The growth in numbers of international students at Lithuanian colleges and universities is actively encouraged.

Currently, there are 46 bachelor's and 61 master's degree programmes offered in foreign languages, such as English, Russian or Polish. By 2013, more than 50 degree programmes additionally will be taught in languages, other than Lithuanian. Allocated funds – 2.3 million €.

By 2020, the national goal is to have 10 percent of international students at HE institutions of Lithuania. Currently, non-Lithuanians comprise 2 percent of total student population.
HIGHER EDUCATION AND RESEARCH REFORM IN LITHUANIA

COUNCIL AS A GOVERNING BODY – NEW PUBLIC MANAGEMENT AND ACCOUNTABILITY

**Before**  
Senates, composed of members of a university’s academic community, were in charge of both academic matters and management.

**After**  
The management of all state universities by the end of 2011 will be reformed by empowering professional boards, composed of university and public representatives, to consider and approve strategic decisions and appoint rectors.

**Governing body**

<table>
<thead>
<tr>
<th>Governing body</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Council</td>
<td>Highest governing body responsible for strategic decisions. Formed of the members of academic community and outside members appointed by minister according to proposal of National HE Council</td>
</tr>
<tr>
<td>Rector</td>
<td>Highest administrative body responsible for the management of a HEI. Elected by HEI’s Council</td>
</tr>
<tr>
<td>Senate</td>
<td>Highest body dealing with academic matters, approving study programs and securing maintenance of academic standards</td>
</tr>
</tbody>
</table>

**NEW LEGAL STATUS – ESSENTIAL ENLARGEMENT OF AUTONOMY**

**Before**  
State institutions of higher education had the legal status of a budgetary entity which provided no incentives to be competitive – money earned went back to state budget by the end of each year.

**After**  
By the end of 2011 all state universities and colleges will become public entities – more freedom for decision making, right to own property and right to manage property entrusted by state.

**RESEARCH – MANAGEMENT**

**Before**

- 17 State Research Institutes
- 18 University Research Institutes
- 10 State Research Institutions

**After**

- 5 Centres of Science and
- 6 State Research Institutes
  (17 Institutes integrated into universities)

Before Funding based on year-to-year basis, only 20 percent based on performance results

After Changing the system towards competitive funding – ratio of basic funding against competition funding: 70/30 in 2009, 60/40 in 2010, 50/50 in 2011

Science Council reformed into Research Council – to distribute competitive funding to research projects.

Agency of Research, Innovation and Technologies established – to distribute competitive funding to technological projects and commercialization.

### NATIONAL SCIENCE PROGRAMMES

Set of programmes financed by state designed to solve problems specific to Lithuania.

- Social Challenges for National Security
- State and Nation: Heritage and Identity
- Future Energy
- Chronic Uninfectious Diseases
- Ecosystems of Lithuania: Climate Change and Human Influence
- Healthy and Safe Food

### EFFICIENT USE OF EU FUNDING

10 percent of EU Structural Funds allocated for Lithuania – for higher education, research and innovation

### Structural Funds Programmes 2007-2013

- **R&D Programme for Cooperation Between Public R&D and Business Sectors** - Integrated Research, HE and Business Centers (Valleys) – 218,06 million €
- **Common National Integrated Programme** - 12 national integrated Programmes in R&D knowledge susceptible economical sectors – 97,43 million €
- **Researchers Career Programme** - professional improvement of researchers at all stages of their career – 182,5 million €
- **National Higher Education Programme** – skills and competences of students and professors, investment into study infrastructure – 221,28 million €

### INTEGRATED CENTERS – “VALLEYS” WHERE RESEARCH, LEARNING AND HIGH TECH BUSINESS COME TOGETHER

12 National Integrated Programmes (million €):
- Biotechnology and Biopharmacy – 10.12
- Joint Laser, New Materials, Electronics, Nanotechnology and Applied Physical Sciences and Technologies – 10.03
- Sustainable Chemistry – 4.93
- IT sector – 3.65
- Medicine sciences – 4.93
- Sustainable use of nature environment – 4.93
- Mechatronics – 2.67
- Development of Civil Engineering Sector and Transport – 2.67
- Lithuanian Creative and Cultural Industries – 2.67
- Humanities and Social Sciences – 0.95
- Maritime sector – 2.73
- Agriculture, Forestry and Food sector – 1.09

There are 34 projects developed on the basis of these programmes. Allocations distributed to them – **51.29 million €**

Funded activities:
- Development of **study programmes** ~ 14 million €
- **Training and mobility** of scientists and other researchers ~ 15 million €
- Improvement of **common science and studies infrastructure** ~ 22 million €

</table>
By 2020, Lithuania targets 2% R&D intensity (0.8% in 2009):

- In the period of the financial crisis, the budget allocations to the higher education and science sector were reduced less than in average to the public sector in total.
- Since 2009, government expenditure on R&D has been increased due to Structural Funds allocations.
- New fiscal incentives for R&D: improved financial accounting in business sector is expected.
- Due to reform: new incentives for research and higher education institutions to commercialize R&D results and attract investments from business sector.
- Reformed research and higher education system and renewed infrastructure: foreign investment should increase.

### Challenges

- Successful implementation of the HE and research reform
- Successful implementation of EU structural funds programmes
- Strengthening of studies, science and business integration for growth of Lithuania's economy
- Globalization and internationalization
- Preparation for the new EU financial programming period of 2014-2020

### R&D expenditure, % of GDP by 2015
